# Diskover

Global visibility of all your unstructured data.

Diskover empowers organizations to effectively manage the entire lifecycle of their data, enabling sustainable growth and scalability. As a web-based platform, Diskover provides a comprehensive global view of fragmented data and filesystems, seamlessly integrating information from various geolocations into a single, accessible interface.

Offering granular analytics, file-based workflow automation, and seamless integration with third-party platforms, Diskover stands out for its flexibility. The platform not only supports but also encourages the deployment and integration of custom plugins, allowing users to tailor their data management processes to their specific needs.

With exceptional speed, reliability, and the ability to handle massive datasets, Diskover scales effortlessly to meet the demands of any organization. By providing global visibility, control, and automation, Diskover enables users to efficiently find and manage files across the globe, optimize storage, and curate data safely and methodically, ensuring a sustainable approach to data management.

Diskover is **storage-agnostic**; it doesn't matter where or who your data is with. Our software can reliably index **massive amounts of data** at **exceptional speed**.

extensible PLUGIN architecture

Due to its **open-source infrastructure**, Diskover allows for **limitless extensibility**, whether the plugins are developed by Diskover, third parties, or end users. Our vast catalog of plugins offers **powerful tools** to harvest extra metadata, curate, move, and check for data integrity. Our unique file action plugins allow authorized users to take action right from the user

ask your METADATA about your DATA

Diskover stands out by indexing **rich business context metadata** into its platform, allowing for **highly granular data management and curation**. This unique approach enables users to not only track and organize their data with precision but also to align data management practices with specific business needs and objectives. By embedding rich metadata, Diskover ensures that data is not just stored, but **intelligently categorized and curated**, facilitating more insightful analysis, streamlined workflows, and better-informed decision-making across the organization.

REDUCE | REUSE

Diskover helps businesses with **DRR (Data Reduction Ratio) savings** using multiple tools and analytics to globally and easily find candidates for cleanup, for example, duplicates, compressed files, temporary files and folders, obsolete data, etc. **Save big** by **automating the lifecycle of your data and reusing your storage space**.
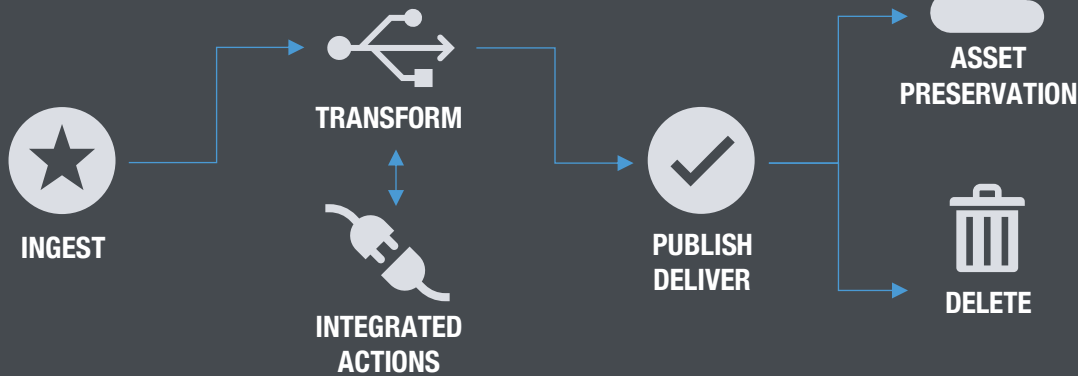

SAVE

Diskover enables users to quickly locate, assess, and manage their data across multiple systems and locations. By **reducing** redundant data, identifying cost-saving opportunities, and automating routine tasks, Diskover **minimizes** manual effort and operational overhead, leading to **significant savings in both time and resources**.

WORKFLOWS | CURATE

Diskover uses your files' metadata enriched with layers of business context to automate workflows, sustainably and efficiently managing your data's complete lifecycle. Workflows dictate where to store a file during its different life stages and what to do once it expires.

ANALYZE | UNDERSTAND

Diskover offers **several customizable reports** and actionable graphics so you can **understand** your data and make informed decisions. You can easily **monitor** your projects, customers, storage costs, etc., as well as compare indexes from two different points in time to easily detect growth and shrinkage and supervise smooth transitions.

Through its unique scanning architecture, Diskover continuously crawls all disconnected data repositories in parallel, creating new indices so you can search, analyze, monitor, compare, move, and automate data curation.

INGEST → **TRANSFORM** / **INTEGRATED ACTIONS** → **PUBLISH DELIVER** → **ASSET PRESERVATION** / **DELETE**

Onboard. Workflow. Repeat.

DISKOVER YOUR SOLUTION

		PRIMARY USE CASES
COMMUNITY No Charge	Try out Diskover's basics features for an unlimited amount of time.	Basic search and data cleanup.
ESSENTIAL Annual Subscription	Features to support enterprise deployment and search.	Search, space management, and data cleanup.
PROFESSIONAL Annual Subscription	Enables and improves efficiencies for all stakeholders.	Efficiency of people through file-based workflows and additional business context.
ENTERPRISE Annual Subscription	Introduces automation to file-based workflows.	Workflow driven automation of processes, threshold and anomaly detection.
**AJA	Diskover Media Edition** Annual Subscription	Sold exclusively by AJA	Engineered for Media and Entertainment workflows.	Increases efficiencies via industry specific plugins while protecting source assets.
LIFE SCIENCE EDITION Annual Subscription	Increases dataflow efficiencies via industry-specific plugins.	Streamlines file management via workflow automation using curated specialized data.
