

Structure the unstructured.

From everyday data management tasks to advanced AI and data lakehouse applications.

FROM EVERYDAY USE CASES TO INDUSTRY-TAILORED SOLUTIONS
Your data is your business. It's also ours.

Take **complete control** of your data.

Find

Global visibility of your data, no matter how much or where it resides.

Analyze.

Gain instant visibility into both what you want to know and valuable insights you didn't know you needed.

Enrich.

Ask your metadata about your data and transform raw, unstructured data into context-rich assets.

Orchestrate.

Whether actions are user-triggered or automated, you're in the driver's seat.

From simple searches to optimizing datasets for AI.

- Diskover transforms raw data into actionable intelligence, whether you're performing a quick global search or preparing datasets for AI workflows. With powerful indexing, unique metadata enrichment, and workflow automation, Diskover empowers organizations to maximize the value of their data.

Scalable, flexible, lightning-fast.

- Diskover's unique architecture is designed to handle the most demanding data environments with ease and delivers exceptional speed, reliability, flexibility, and scalability.
- Diskover is non-proprietary and accessible through any web browser.

Sustainable data lifecycle solution.

- Diskover helps organizations reduce waste, minimize costs, and optimize resources—both human and infrastructural—by leveraging intelligent indexing, metadata-driven automation, and storage tiering. With actionable insights into data usage and relevance, businesses can implement a sustainable, long-term strategy that enhances efficiency while controlling their storage footprint.

Your journey, your success—our priority.

- Diskover caters to users of all skill levels, providing exceptional support and abundant resources to ensure ongoing success.

YOUR SINGLE SOURCE OF TRUTH

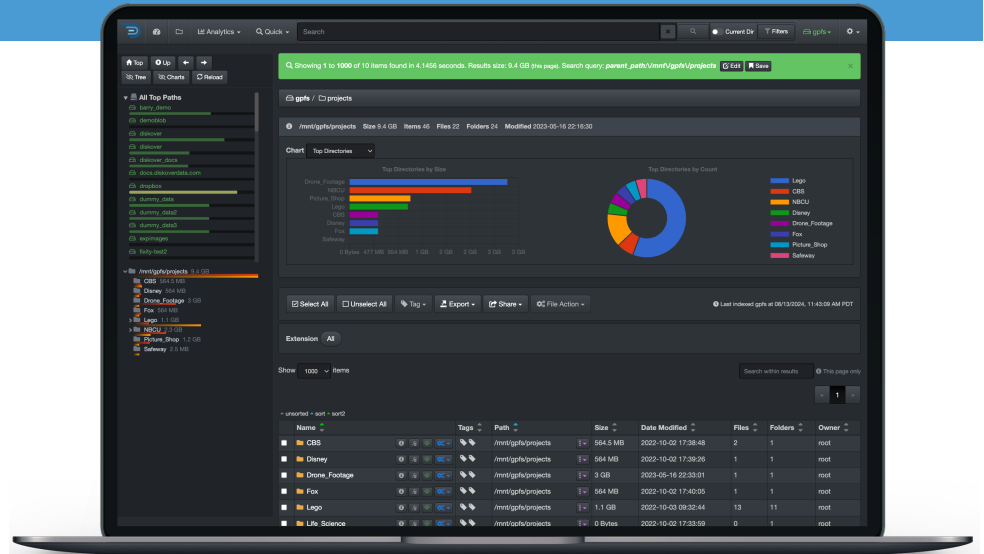

Find anything anywhere.

Unified view of all your data.

- Global findability and federated searches across your entire complex unstructured data universe.
- Several intuitive built-in search tools make finding data effortless.
- Powerful manual search queries allowing for super granular searches.
- Easy export and share of results.

Supercharged indexing.

- Far-reaching and agnostic, it doesn't matter where your data resides or who's holding it.
- Diskover continuously scans disconnected data repositories in parallel, creating new indices for seamless data management.
- Optimized cached scanning reports an average reduction of 50% to 75% in scan times for building subsequent indexes.

ENRICH

Ask your metadata about your data.

Metadata is the lifeblood of modern data management and analytics. It transforms raw data into context-rich assets, empowering organizations to unlock insights, streamline workflows, and drive smarter decisions.

Business-Centric Metadata Catalog

Base Metadata

Filename, size, time, owner, extension, path, etc.

Tags

Manual and Automated

Business-Context Metadata

SAMPLE

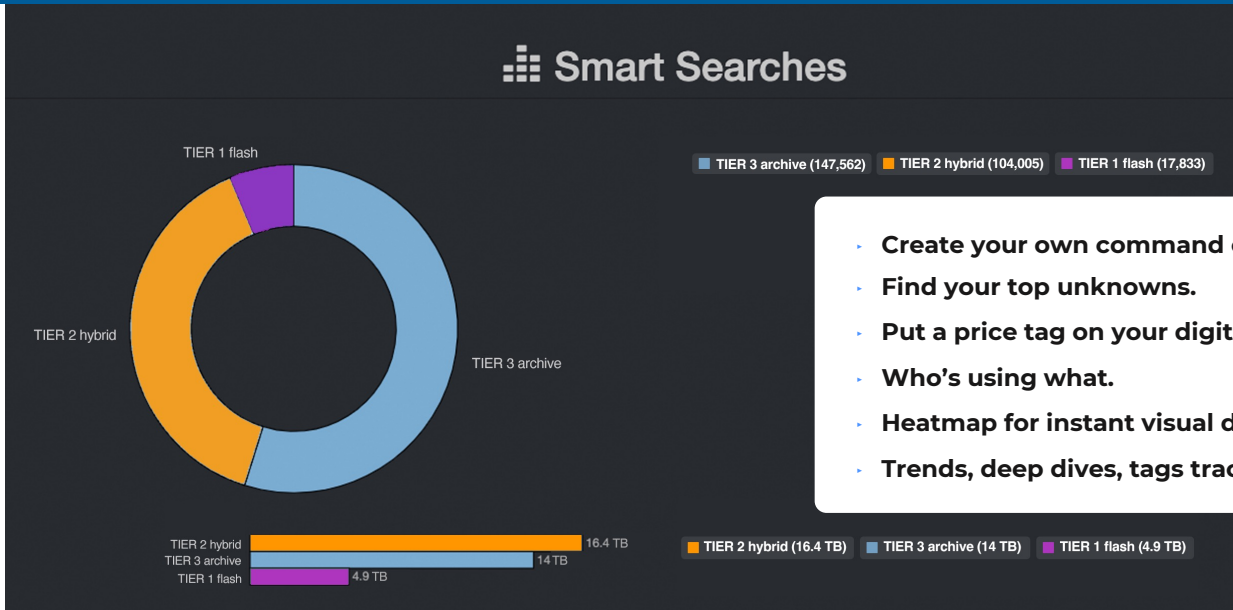

Diskover sets the standard in the data management space with its extensive metadata catalog. In turn, these attributes allow for:

- Granular searches.
- In-depth analysis.
- Precise data automation.
- Deliver relevant AI datasets.

ANALYZE, UNDERSTAND, ORGANIZE

Transform chaos into powerful insights.

Uncover hidden patterns, trends, and opportunities within your digital assets to make smarter decisions, optimize storage, and maximize the value of your investment.

ORCHESTRATE

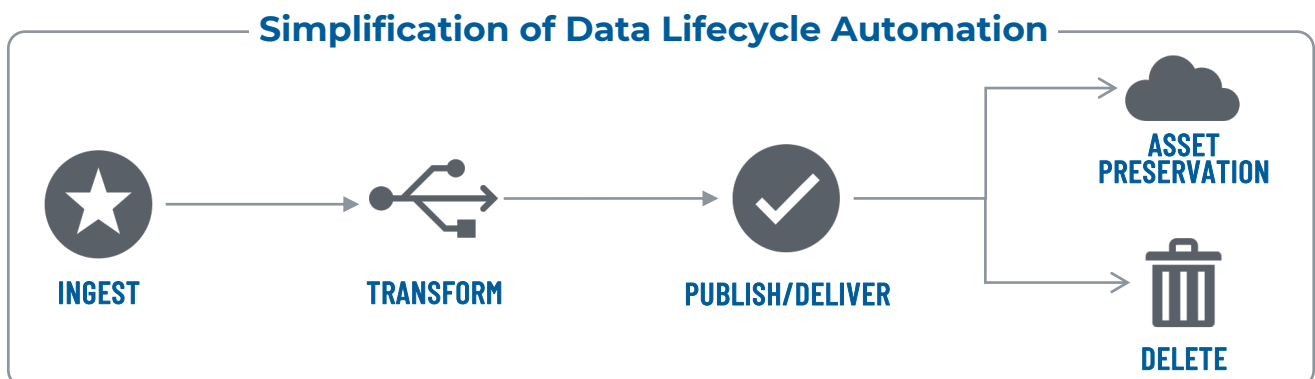

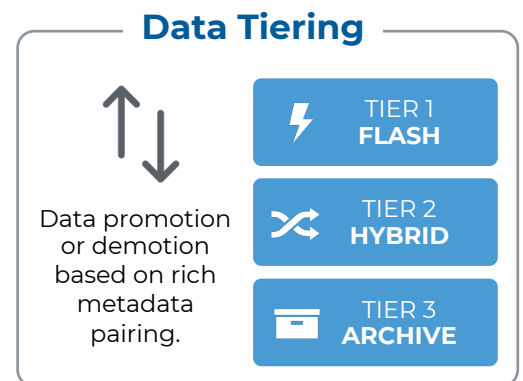

Take control of all your data—for good.

Diskover's ultimate mission is to enable sustainable data curation. Now that you've located, analyzed, and structured your data with Diskover's smart tools, it's time to optimize and engage your datasets through automated workflows.

Sustainable success through automated scheduled tasks.

While every project has unique requirements, the production process remains consistent. Diskover's configurable plugins and automated scheduled tasks create a virtual conveyor belt for your data, keeping it organized and maximizing the value of your existing storage resources.

- Ongoing data hygiene.
- Optimized data tiering via key-value pairing.
- Data prep for AI pipelines and data lakes, lakehouses.
- Data curation.
- Complex cutting-edge processes management.

Diskover bridges the gap for AI pipeline opportunities.

Diskover transforms disorganized data into relevant, actionable datasets, providing the ability to design unique LLMs and Multi-Modal Models tailored to your specific needs.

PLUGINS ECOSYSTEM

Supercharged tools—limitless innovation.

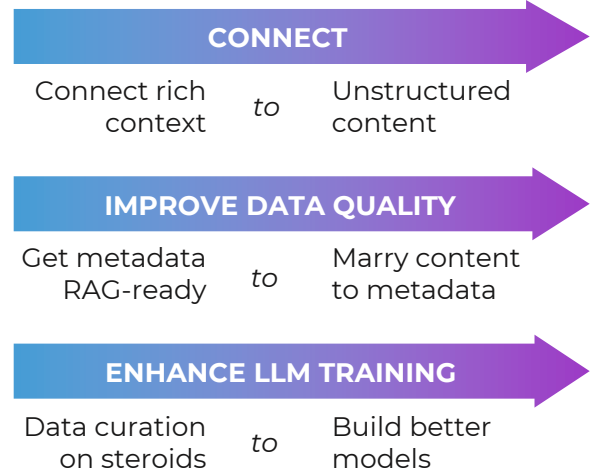

Diskover's open-source infrastructure provides unparalleled extensibility, allowing plugins to be developed by Diskover, third parties, or even end users to address specific requirements.

Our comprehensive data management solution features a diverse array of integrated, configurable tools.

One standout feature is file action, which enables authorized users to execute file operations directly from the user interface.

Explore our plugins built to simplify and streamline:

- Metadata harvest
- Data curation
- Data integrity
- Data movers
- File actions

Proven solutions for your data, your industry, your goals.

About Diskover.

Diskover Data empowers organizations with advanced data management, turning complex datasets into actionable insights. Its powerful platform integrates cutting-edge indexing, search, and analytics to streamline workflows, automate processes, and enhance data governance. Seamlessly handling diverse storage environments, Diskover accelerates AI and BI pipelines by enriching metadata, optimizing data curation, and enabling fast, intelligent retrieval. A robust plugin ecosystem allows deep customization and automation, tailoring workflows to unique needs. Trusted globally, Diskover unlocks the full potential of digital assets, driving smarter decisions and operational excellence.
