

Make it seamless.

Closing the gaps between raw unstructured data and curated AI-ready datasets.

UNSTRUCTURED DATA

Unify all your distributed filesystems, no matter where they live.

SUPER-CONNECTOR

Comprehensive data management platform with agentic workflows—curating datasets so only relevant content reaches AI/ML pipelines.

From storage to AI success.

Together with Snowflake, Diskover enables partners to quickly **locate, curate, and route** unstructured data into AI-ready pipelines, helping organizations **cut costs, accelerate insights, and unlock new revenue opportunities** at scale.

1

Globally find and enrich all your unstructured data.

Diskover acts as a global indexer across your entire storage landscape. It scans file systems at scale, builds a searchable metadata catalog, and adds business context through intelligent tagging and enrichment.

2

Move curated dataset to Snowflake via Openflow.

Diskover uses Snowflake Openflow to seamlessly move relevant datasets into Snowflake—ready to query, join, or feed into AI pipelines like Cortex, without re-architecting or brittle ETL.

3

Increase consumption and light up new use cases for Cortex, LLMs, and Snowflake Intelligence.

On-prem unstructured data is a massive untapped use case that represents a great opportunity to unlock Enterprise AI. The combination of Diskover and Snowflake simplifies and automates customers' ability to gain genuine insights from their unstructured data.

OPENFLOW INTEGRATION

Process exabytes of unstructured data.

Connect.

- Discover's Connected App for Snowflake Marketplace makes it simple to connect distributed file systems, objects, and storage environments directly into Snowflake. Customers can buy with Snowflake credits and integrate immediately into their existing data pipelines.

Agentic Workflows.

- Discover automates the heavy lifting of indexing, filtering, and curating unstructured data at scale. With one click, curated, metadata-rich datasets flow into Snowflake Openflow — ensuring AI models are trained on meaningful, high-integrity inputs.

Automate.

- Policy-driven automation enables continuous curation and data movement. Discover automated workflows respond to changes in data, lifecycle events, or business rules, keeping Snowflake pipelines always AI-ready without manual intervention.

Data is no longer just stored — it's **searchable, contextualized, and ready for action** across the AI lifecycle.

“Proud to support Discover Data as they help companies uncover their most valuable data across legacy systems with a unified, searchable view. Together with Snowflake's easy, trusted, and connected platform, we're helping customers seamlessly ingest critical data and build a strong, AI-ready foundation.”
—Sridhar Ramaswamy, CEO, Snowflake.

ABOUT DISCOVER

Discover transforms unstructured data into curated, high-value assets through fast indexing, enriched metadata, and intelligent automation—including an AI Data Assistant to accelerate insight and action. Designed for hybrid environments, it enables smart data movement, cost optimization, and AI/BI readiness with curated datasets delivered to analytics platforms and data lakehouses via multistream integration. With powerful search, policy-driven workflows, and a flexible plugin ecosystem, Discover gives organizations full visibility and control across their data estate.
