DATASHEET

DataDelivery

Data in motion. Intelligence in action. Global control.

DataDelivery brings global visibility, cost-aware intelligence, and high-performance mobility together in one place. Every move is planned, priced, and automated.

The challenges and their impact

NO SINGLE VIEW

Every storage platform has its own console and bill, and none of them sees the others.

Impact: nobody can say what the estate holds or what it costs.

STRANDED SPEND

Cold and duplicate files sit on premium storage nobody reviews.

Impact: the bill climbs every quarter to hold data no one will open again.

UNMANAGED RISK

Regulated files drift into forgotten shares with no record of what moved or who approved it.

Impact: every audit turns into an archaeology project.

The solution at a glance

THE SOLUTION

DataDelivery gives you one view of every file you store, the cost intelligence to decide what should happen next, and the engine to carry it out at scale. With the AI Connector, ask questions in plain language and act on the answers.

HOW IT WORKS

See what you have and what it costs. Model the change before it happens, down to the file list, the duration, and the egress. Approve it once, then policy runs it unattended and logs every action, so the result is provable months later.

WHY IT MATTERS

Storage spend drops and stays down without anyone remembering to check. Routine cleanup and tiering run on a schedule instead of arriving as tickets. Every action is logged, so cost and compliance questions have the same answer.

Core capabilities

GLOBAL VISIBILITY & FINDABILITY

One index covers every file in the estate, with what it costs, who owns it, and when it was last touched. Nothing is copied to build it. Metadata alone does the work.

HIGH-PERFORMANCE MOBILITY

A proprietary engine pushes, pulls, replicates, and tiers data with minimal latency and overhead, and without loading the systems your teams depend on.

RESILIENT EXECUTION & FAILOVER

Automatic retries, verification, and rollback logic protect data integrity through failures and partial outages, so transfers stay predictable under stress.

COST-AWARE INTELLIGENCE

Track storage class, lifecycle transitions, and egress, and forecast the impact before changes go live. FinOps decisions without the bill shock.

DRY RUN BEFORE EVERY MOVE

Simulate any job before it runs. See the cost, the duration, the egress, and exactly which files are in scope, so you approve a plan instead of a guess.

POLICY-DRIVEN ORCHESTRATION

Policies decide when and how data moves, tiers, or syncs, using metadata, usage patterns, and cost signals. Decisions become automated and consistent.

About Diskover

Diskover helps enterprises structure unstructured data across cloud, on-prem, and edge environments, making it easier to search, govern, optimize, and deliver file data for compliance, analytics, and AI-ready workflows.

Diskover

30-50%
of storage reclaimed by tiering and removing ROT data

50
Gbps transfer speed with a single agent

30+
hours a week returned to data teams

3–6
months to payback after deployment

Built for modern enterprise data environments

FAST & OPEN
DataDelivery works with the storage you already run. A high-performance engine with dynamic threading, multipart acceleration, and bandwidth control keeps large transfers fast without loading production systems. Standard APIs, webhooks, and role-based access control mean no lock-in, and it operates alongside movers you already have.

SECURE & YOURS
A controller runs as SaaS or hosted in your own environment, with lightweight agents close to the storage on Windows, Linux, or Mac. Access is browser-based, so end users install nothing. Transfers are encrypted, authenticated, and checksum verified, and your files stay in your systems. No copy of your data ever lives with us.

WORKS ACROSS Cloud · On-prem · Hybrid · NAS · SAN · Object · Tape · Archive · Data lakes · Lakehouses · AI/BI/ML

Outcomes teams can measure

SAVINGS THAT HOLD
Tier down what nobody opens, defer the next capacity purchase, and let policy keep your storage lean and clean.

DECISIONS YOU CAN DEFEND
Model any change before it happens, so cost and consequence are known at approval, not after the fact.

HOURS BACK TO YOUR TEAM
Plain-language answers and policies replace ticket queues, spreadsheets, and one-off scripts.

PROTECTED & PROVABLE
Regulated data moves encrypted, stays under retention policy, and leaves a full audit trail, so nothing sits unaccounted for.

Common use cases

STORAGE REFRESH & MIGRATION
A refresh starts with knowing what you actually have. DataDelivery inventories the estate, models the job with its cost and duration, and carries only what matters onto the new platform, so decades of junk stay behind.

COST & CAPACITY PLANNING
Budget season arrives and nobody can forecast next year's storage. DataDelivery shows what each tier costs today, what cold and duplicate data is costing you, and what a policy change would save before you commit.

GOVERNANCE & AUDIT READINESS
Regulated files end up in places nobody tracks. DataDelivery flags likely sensitive files, brings them under a retention policy, and keeps a full record of every action, so an audit request takes hours instead of weeks.

AI/BI/ML DELIVERY
AI and analytics teams spend more time locating inputs than building with them. DataDelivery finds the right datasets, promotes them to the compute on policy, and keeps the pipeline supplied without anyone filing a ticket.

GET STARTED

See what a move really costs.

Not a slide. Your files, your vendors, your numbers.
